

DiVitas has developed a new class of mobile unified communications that provides seamless voice and data mobility over disparate networks to all enterprise employees by taking advantage of disruptive technologies such as WiFi, the Internet, and dual-mode phones. DiVitas is the first company to enable such unified mobility system capabilities, while giving businesses complete control over their communications system. Headquartered in Mountain View, California, DiVitas Networks is backed by Clearstone Venture Partners, Menlo Ventures and Silicon Valley Bank and has received three rounds of financing. More information is available at www.divitas.com.

- **Mobile Unified Communications**

DiVitas Mobile UC Server
DiVitas Mobile UC Client

Product Overview

As part of a broad market category defined as Mobile Unified Communications, DiVitas' Mobile Unified Communications solution (Mobile UC) consists of two elements: the DiVitas Mobile UC Client and the DiVitas Mobile UC Server. This system uses VoIP-over-WiFi and cellular connections to provide seamless "in-session" roaming to mobilize business calls and applications.

The Mobile UC Client is a handset-independent software client that resides on the mobile device and communicates seamlessly with the DiVitas Mobile UC Server. It provides an integrated multi-mode communications interface for ease of use with applications such as voice, Short Message Service (SMS), instant messaging (IM), visual voice-mail and presence. It has been certified with a number of dual-mode handsets on multiple OS platforms. A single handset ensures your presence and participation in business operations, irrespective of the underlying network available, to keep you connected.

The DiVitas Mobile UC Server is single device installed at the company's premises, which works in conjunction with the corporate PBX system (IP or Legacy). The DiVitas Server allows an enterprise to control and manage mobile devices as they roam seamlessly among disparate wireless networks. The DiVitas Server supports WiFi as well as cellular data connections.

Unlike traditional mobile telephony solutions, DiVitas Mobile UC places the control and monitoring of dual-mode cellular phone activity in the hands of the enterprise IT managers, providing total control of handsets, applications, and adherence to compliance policies.

The DiVitas Mobile UC solution is unique in addressing the major challenges of implementing a business mobility solution by minimizing complexity (consolidation into one device), lowering operational and capital equipment costs, and providing greater coverage area, call continuity and control capabilities to businesses of all sizes.

Solution Overview

DiVitas has partnered with ShoreTel to deliver a valuable mobile extension capability to the ShoreTel telephony product family. Providing logical mobile extensions to the ShoreTel solution, the DiVitas Mobile UC solution is installed as a mobility appliance overlay within the enterprise/SMB local area network, and collaborates with DiVitas-supported Windows Mobile and Symbian dual-mode handsets to extend the telephony access capability beyond the office to the cellular network and public or private WiFi hotspots.

The DiVitas Networks Mobile UC solution grants end users continuous accessibility by relying on a single dual-mode device for wirelessly placing and receiving calls as a ShoreTel **Off System Extension (OSE)**. DiVitas Server enables seamless roaming between WiFi and Cellular networks, resulting in decreased user call response times and increased mobile associate productivity. DiVitas' Mobile UC also extends ShoreTel telephony features such as abbreviated dialing, call transfer, and conferencing to the mobile handset—on or off the corporate campus.

“DiVitas will increase productivity at an affordable cost, and we also predict the DiVitas UMS solution will help drop overall communications costs.”

— Alan Race, Assistant Director ICT
New College Durham

Key Features/Benefits

Mobility Beyond the Office

DiVitas Mobile UC extends ShoreTel features and functionality to the mobile phone by providing PBX extensions on the cellular network.

Seamless Roaming

In-session seamless handoff between WiFi and cellular networks provides greater coverage area without dropping the call.

Single Voicemail

Uses the DiVitas client to access ShoreTel's messaging system and reduces multiple voicemail locations.

Mobilized Business Applications

Combines the power of voice, email, IM, presence, schedules and more to stay connected using a single mobile handset.

Customer Value

ShoreTel IP telephony solution infrastructure provides businesses with a secure, cost-effective, and scalable VoIP solution that is easy to manage.

DiVitas Networks' Mobile UC solution mobilizes businesses by consolidating communications devices and providing seamless WiFi/cellular continuity, enabling greater cost savings, coverage and control.

About DiVitas Networks

DiVitas Networks is the leader in the emerging mobile unified communications market and is the first such company to deliver a new class of enterprise network appliance that provides seamless voice and data mobility over disparate networks, while giving the enterprise complete control of its communications system.

About ShoreTel, Inc.

ShoreTel is a leading provider of enterprise IP telephony solutions. The DiVitas-ShoreTel solution provides customers with a number of key benefits, including ease of use, manageability and lower total cost of ownership.

Disclaimer

To be “ShoreTel Certified” means that Technology Partner's product will inter-operate with the ShoreTel system, but ShoreTel does not certify that the features or functionality of Technology Partner's product will perform as specified by Technology Partner nor that Technology Partner's product will meet your specific application needs or requirements. To inter-operate means that Technology Partner's product is able to exchange, use and share information with the ShoreTel system.
